

Services Available

from **SYSTEMS ARTISANS**

Viruses and other malware – “We see ‘em, we swat ‘em!” I can remove the bad stuff on your computer, and make sure your anti-virus is correctly set up.

Consulting – “Do I need a new computer?” “How do I do?” “What about?” I can help you answer these questions.

Software repairs – “My **X** stopped working!” Let me get that fixed for you.

Upgrades – If your computer needs more memory, or a bigger disk, or other upgrades, I can find the best deals, buy them for you, and then install them.

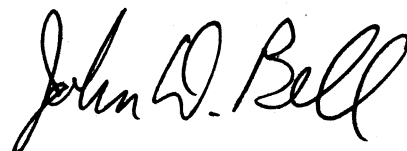

Hardware repairs (to the extent that the computer supports them, i.e. only interchangeable parts)

Networking – I can lay out and install both wired and wireless networks for small offices and home setups.

Setting up a new machine – I will get rid of any “bloatware” or other unnecessary software on the machine; set up your email, browsers, office automation suite, etc.; make sure your anti-virus and anti-malware programs are up-to-date; and in all other ways get the machine from ‘just out of the box’ to ‘ready to use’. *If you are moving from an old computer to a new one*, I can move all your files, bookmarks, preferences, desktop setting, etc. - it will look and run just like the old one, as far as possible.

Custom programming / systems integration

Ask me if I can solve your computer problems!

A handwritten signature in black ink that reads "John D. Bell". The signature is written in a cursive, flowing style.
